

We need to write a code that can help us to maximize the profit. That is when to Buy and Sell a particular stock based on given price on a particular day so that one can earn the maximum profit?

Best Time to Buy & Sell Stocks

↳ Price = [7, 1, 5, 3, 6, 4, 15]
 1 2 3 4 5 6 7 ← Day wise price of a stock
 output → max-profit = 15 - 1 = 14 → For the person

max \rightarrow $\text{price}[i] - \text{min_price}$
